

BURRI cityGREEN MAMMUT

Durable and robust mobile seating furniture under a vitalising canopy of green

The cityGREEN MAMMUT mobile urban green space consists of an extremely robust plant trough reinforced with 12mm steel panels and combined with an elegant round bench.

The mobile urban green space is more than just seating. As with all other members of the BURRI cityGREEN family of products, MAMMUT serves both the revitalisation and the greening of public spaces. In addition to the functions of air purifier, source of oxygen and haven for biodiversity, these green areas provide summer shade for dwellers and help regulate the microclimate in squares and streets.

MAMMUT can be easily relocated via forklift and will find immediate application also where the public space features specific constraints. Uses include uncomplicated configuration of public spaces as inviting and shaded seating areas for relaxation. However, with its weight and easy transportability, MAMMUT is also perfectly suited for temporary use in those locations that also

require unambiguous demarcation from nearby traffic, and thus also helps to safeguard safety in the public space.

The high-quality, steam-bent Swiss wood seating surfaces can also be lacquered in a variety of colours as desired. As an option, the plant trough can be lined with BURRI's patented ROOTPAK-K®HMR® coating to prevent water leakage and corrosion, and to provide the product with even longer service life. These mobile urban green spaces from BURRI are complemented by short delivery times, advice on the choice of plants and attractive prices.

Plant trough construction:

- 12 mm steel plate
- hot-dip galvanised or raw oiled
- lacquered (optional colour of your choice)
- ROOTPAK-K®HMR® coating (optional)
- Adjustable levelling tubular frame on underside
- Numerous available forms

Round bench construction:

- Prime quality natural larch
- Ash from Switzerland, with four coatings of the colour of choice
- Wood steam-bent

Dimensions (using the example of the round model):

- Plant trough height: 1080 mm
- Bench width: 588 mm
- Total diameter: 4010 mm
- Trough diameter: 2576 mm
- Capacity: approx. 5629 l
- Weight: approx. 7t (including contents)

Installation:

- freestanding
- Easy relocation via forklift

Recommended planting:

- native maple (*Acer platanoides*), at least 5 years old
- long green phase, large crown (approx. 6x6 m)
- branches begin at approx. 2.8 – 3.0 m
- shallow roots
