

Mezzentino

Bench system for the urban space.

The Mezzentino bench, based on the city bench type V, with its ergonomic design of seating areas offers a high seating comfort without pressure marks even at low temperatures. The use of NATWOOD for the seat slats has, thanks to a special resin treatment an extremely smooth and hard surface that stays sealed for many years.

In places with existing Landi benches these can easily be replaced by the Mezzentino benches without any foundation operations. For long structures, benches with only one foot each can simply be added. Additions with backrest in both directions and dimensions between axes of 2m, or additions of benches with or without backrest are easily possible too.

Design:

- laser-contoured steel side panels, hot-dip galvanised, anthracite powder-coated
- seat slats NATWOOD
- safety screws, stainless steel
- armrest optional
- bench types for any length can be added to optionally, dimensions between axes 2.105m

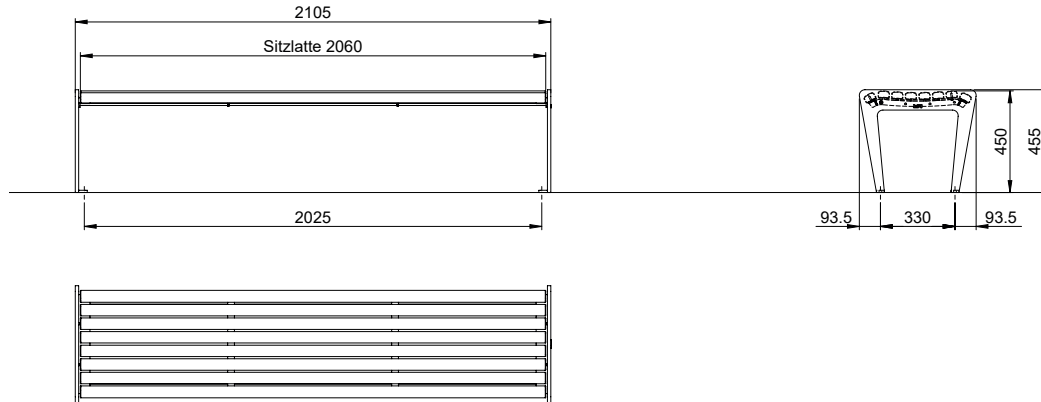

Models:

- based on City bench type V
- with backrest
- without backrest

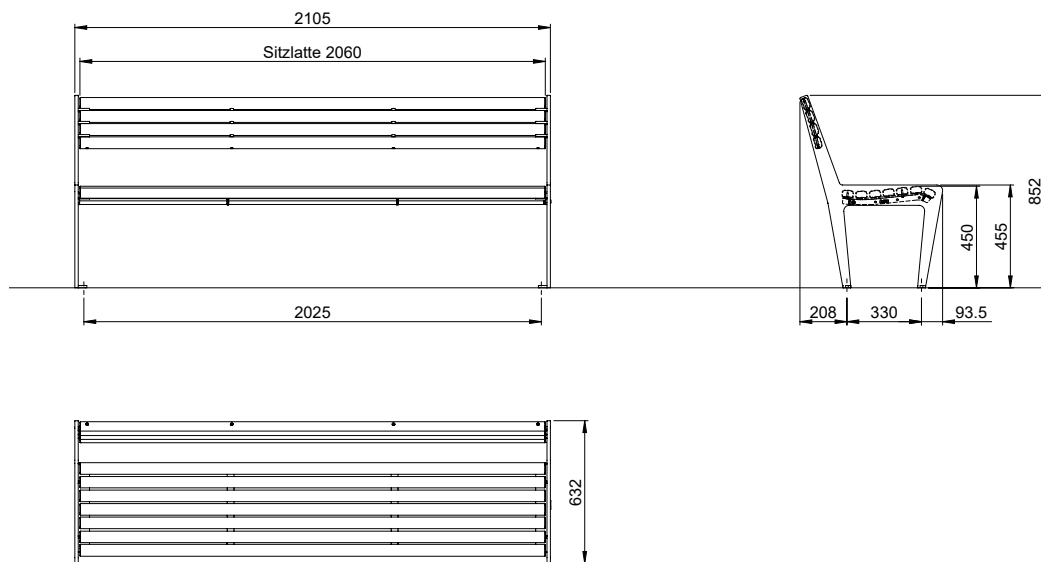

Special additions and other shapes on request.

For technical specifications see reverse. Prices according to price list.
