

St. Moritz Design Gallery

Modernisation and refurbishment of City Light boxes

- BURRI City Lights LK 4000
- Retrofit module for halogen luminaires

The St. Moritz Design Gallery in Parkhaus Serletta connects the train station with the town centre. Every year, over one million visitors enjoy the exhibitions of posters and photo-graphs, many on the topic of tour-ism. 16 years ago, BURRI was com-missioned with the develop-ment and installation of a variety of City Light LK 4000 light boxes for the exclusive art gallery.

BURRI intentionally developed the City Lights as a modular system and ensured that the design would facili-tate future adaptations to user re-quirements as well as technical ex-pansion.

In late 2019, BURRI upgraded the City Lights in St. Moritz to the latest generation in long-lasting and ener-gy-efficient LED technology. Along-side, all of the hardware was subject to a thorough cleaning and overhaul.

BURRI also converted the existing wall luminaires to LED technology with the aim of giving them a second life.

This will extend the lifespan of these high-grade products by many more years and more than halve the ener-gy requirements of the system.

The municipality of St. Moritz is very happy with the results: *“We’re glad that we chose this solution from BURRI. As a contractor, BURRI un-derstands our concerns, and contin-ues to take care of them even after many years. We will turn straight to BURRI for the next pro-ject.”*
